

50Hertz Netzquartier, Berlin

Sustainability using the example of 50Hertz

50Hertz Netzquartier, Berlin

Facts and Figures

One of SOMMER's goals is to continuously improve the sustainability of our construction projects by complying with the specifications of sustainability system certificates such as LEED, DGNB during planning, production, assembly and deconstruction. For this reason, we have been a member of DGNB e.V. since 2019. Due to its outstanding architecture, the 50Hertz Netzquartier was also the first building worldwide to be awarded „DGNB Diamond“.

To create a more varied facade appearance, individual columns were omitted and others were added again in a smaller grid. The resulting net-like framework allows column-free interior spaces, which means that the rooms can be used and designed variably.

CLIENT

Ed. Züblin AG, Berlin

ARCHITECT

Kadawittfeld Architektur + LOVE architecture

EXECUTION PERIOD

August 2015 to September 2016

PRODUCTS

- Aluminium facade
- SOKALTHERM® windows
- sheet metal soffits
- gratings as escape routes
- rope safety system
