

High School Airbase, Ramstein

Securing the school

High School Airbase, Ramstein

Facts and Figures

The new Ramstein High School building, designed by Dorsch International Consultants, provides space for approximately 1,100 students in grades 9 through 12. The building complies with guidelines for 21st century educational facilities developed by DoDEA (U.S. Department of Defense Education Division).

This involves modifying individual classrooms to group different sized areas to create an opportunity for learning from each area within a 21st century school and to eliminate the separation between instructional spaces and common areas.
