

**EBB**, Berlin  
Europacity/Art Campus Berlin

# EBB, Berlin

## Facts and Figures

North of Berlin's main train station, former industrial sites of Deutsche Bahn are being developed for urban development under the title „Europacity“. The southern part of this development area, named „Kunst-Campus Berlin“, is being designed by private investors.

The building is intended, on the one hand, to pick up on the urban atmosphere in front of the urban context of the historic canal with its representative buildings and, on the other hand, to form a self-confident accent. At the same time, the client presents itself with its engineering competence by means of a sophisticated exposed concrete facade with an unusual type of construction.

### CLIENT

Familie Ernst Basler AG

---

### ARCHITECT

Miller & Maranta Architekten AG

---

### EXECUTION PERIOD

April 2015 to February 2016
