

Hafenspitze, Düsseldorf

Architecture in Düsseldorf's Media Harbour

Hafenspitze, Düsseldorf

Facts and Figures

In Düsseldorf's Media Harbour, the new Hafenspitze Düsseldorf was built according to the plans of SOP Architekten. The building ensemble consists of two 65 m high glazed twin towers and a 7-story office building. The impressive cantilevers emphasize the formally reduced design language of the buildings, which today are considered one of Düsseldorf's architectural flagships.

The unusual facade construction required SOMMER to make a solid calculation of the statics as well as a sophisticated assembly concept. For the realization of the water basin with the bottom surface made of glass (accessible), which is located on the plateau between the towers, SOMMER was able to score with its great know-how in the construction of special structures.

CLIENT

Projektgesellschaft Hafenspitze mbH & Co.KG, Düsseldorf

ARCHITECT

slapa oberholz pszczulny architekten GmbH & Co. KG

EXECUTION PERIOD

December 2008 until November 2009

PRODUCTS

- Double-skin SOKALTHERM® element facade with impact panels
- mullion/transom facade
- hydraulically moved staircase
- irrigated roof construction ballroom roof
