Securing valuable exhibits

# New National Museum, Oslo

## Facts and Figures

Buildings of public institutions are increasingly targets of vandalism, crime or terrorist attacks. In order to protect people, art treasures and buildings from the effects of attacks, we work together with architects, planners, project developers and building owners to develop viable solutions for securing the entire building envelope. Coordinated with the colour concept of the architects Kleihues + Schuwerk, SOMMER developed project-specific solutions for the building envelope together with the planners. The façade with large glass panes and the glass roof in bronze, manufactured in the SOMMER MULTITHERM® system, supplemented by fire protection safety doors and an oversized roof hatch for inserting large-format exhibits, give one of the leading cultural centres in Europe an unmistakable face.

### CLIENT

AF Gruppen Norge AS, Oslo

---

### ARCHITECT

Architekten Kleihues + Schuwerk

---

### EXECUTION PERIOD

March 2016 until June 2019

---

### PRODUCTS
