

RWTH Campus Melaten, Aachen

Structured Aesthetics for Scientists

RWTH Campus Melaten, Aachen

Facts and Figures

16 research clusters are being created on the RWTH Aachen Campus in close proximity to the major research institutes and facilities. One of the largest technology-oriented research landscapes in Europe is thus spreading out over more than 2.5 km². The IMMOFINANZ building complex, which consists of three complex structures designed by the Munich star architects Henn, is characterised by its flexibility, modularity and sustainability. The buildings provide space for around 800 scientists and production technology experts. The basis of our facades are the designs and plans of the architects Henn and the facade planner Rache Engineering required functionality. Windows, glass roofs and transparent, sound-insulating partition walls allow effective, fatigue-free work with plenty of daylight.

CLIENT

Immofinanz Campus GmbH & Co. KG, Düsseldorf

ARCHITECT

HENN GmbH, Munich

EXECUTION PERIOD

March 2016 until June 2019

PRODUCTS

- SOKALTHERM® aluminium windows
- aluminium mullion/transom facade in the Schüco system
- MULTITHERM® steel mullion/transom facade
- sheet metal cladding and atrium facade
- MULTITHERM® steel glass roof
- interior glare protection
